

HVAC

Your home's heating and air conditioning systems are typically the most expensive items to repair or replace around your home.

CENTRAL A/C SYSTEM—repairs of your home's air conditioning system could run in the thousands of dollars. The major mechanical parts of your home's central A/C system are covered. These parts include the interior air handler, blower motor, compressor, evaporator coils, all wires, fuses and relays.

Avg. Replacement cost: \$1,525-\$6,500

WALL UNITS—up to three (3) interior wall units are covered. Covered parts include the compressor, evaporator coils, all wires, fuses and relays.

Avg. Replacement cost: \$1,525-\$6,500

CENTRAL HEATING SYSTEM—similar to the A/C system, the home's heating system is also a very expensive system to repair and/or replace. All major mechanical parts and components, including the oil or gas burners, fan motors, igniters, pilot assemblies, wires and switches are covered.

Avg. Replacement cost: \$1,500-4,500

HEAT PUMP—the heat pump takes heat from the outside air unit into the house. All major components, including the compressor, condenser, and evaporator are covered. *Avg. Replacement cost: \$3,000-\$7,000*
